

Tape transparent paper over the blank strips but leave the example open. Copy the blank strips. Shade in the direction of the arrows and make sure the passages in the values are smooth. Shade in slightly different directions.

For the light part use H3 - H, for the midtones use H, HB, B and for the shadow use B-B3 pencils and work in thin layers. Start with the strips and after that the cylinder. Make sure the values are equal to the example and sharpen your pencil tip every minute.

Total time for the strip is minimum 2 hours. For the cylinder 4 hours. When you go faster it will deteriorate the quality of your drawing, so slow down if you don't want to repeat this exercise.
